

Q4: ^{count, result} Declare table $\leftarrow$ INT
 table $\leftarrow$ 0, count $\leftarrow$ 1, ~~result~~ $\leftarrow$ 0
 While table $\leq$ 10 Do
 ~~IF~~ IF table MOD 3 == 0 then $\leftarrow$ table $\leftarrow$ table + 1
 result $\leftarrow$ 0
 count $\leftarrow$ 1
 table $\leftarrow$ table + 1
 Else While ~~count~~ $\leq$ 10 Do
 While count $\leq$ 10 Do
 ~~And~~ result $\leftarrow$ table * count $\leftarrow$ Output result
 count $\leftarrow$ count + 1
 Endwhile
 Endif
 Endwhile

table	count	result
0	1	
1	2	1
		2
	3	3
	4	4
		:

- for Q4:
1. Declare table, count and result as integer
 2. Initialize table with 0, count with 1 and result with 0.
 3. Use a while loop until table is less than 11.
 4. Use if statement increment table each time the loop runs.
 5. If the remainder of table with 3 is 0, then it's a multiple of three so skip the printing and increment table. Else loop till count is 10 to print (table * count), incrementing count after each time the loop runs.
