Q1: Declare row, col, k, total : Integer
row, col, k, total ← 0
~~int~~ choice : integer, choice ← 0, ~~int~~ num : int, num ← 0
input rows, col
seating[row][col] : Array of character
row_counter[row] : Array of integer

for i = 1 to row
    rowcounter[i] = 0

for j = 1 to row
    for k = 1 to col
        Output " is the seat occupied? (0 for no, 1 for yes)"
        Input choice
        seating[~~row~~j][j/k] = choice

for L = 1 to row
    Output "R_", L, "
    for m = 1 to col
        if seating[L][m] = "0"
            seating[L][m] = "_"
            row_counter[L] += 1
            total += 1
        else
            Seating[L][m] = 'X'
        ~~Of~~ Output seating[L][m]
    ~~Output~~
Output total

Date

```
available=0
for l = 01 to col
  if seating[j][l] = '-'
    available += 1
    end = l
  if (available = k)
    rowcenter[j] = rowcenter[j] - k
    output "Seat allocated"
    seat-allocated = true
    for m = (end-k+1) to (end+01)
      seating[j][m] = 'X'
  else
    available = 0

if (seat-allocated = true)
  total = total - k
Output total
```

→ Inputs :

1. row, ~~co~~
2. col
3. seat status (0 or 1)
4. booking seats (num)

→ Output

1. total
2. Allocation result (allocated or not)
