Q2: function divisor_sum(n: integer) { Returns integer
sum: Integer, sum ← 0
for i = 1 to n/2
if (n % i) =< 0
sum = sum + i
return sum

~~int A~~
n: integer, n ← 0
Output "Enter number:"
input num
num1, num2, cont: integer, num1, num2, cont ← 0

for j = 2 to n
num1 = divisorsum(j)
num2 = divisor_sum(num1)
if num2 = j AND num1 NOT(j) AND j < num1
cont += 1
if cont = 1
~~output print~~ "Amicable pair for", n, "are:"
Output j, num1

Output cont
→ Input:
1. n
→ Output:
1. Amicable pairs (j, num1)
